

**Cyber Security Incident Management – Fighting fire
with fire ...**

Arun Perinkolam

Senior Manager, Security & Privacy Services
Deloitte

Professional Techniques – T21

Session Abstract

It has become increasingly challenging for organizations these days to keep abreast of information security threats and trends, and to move from reactive “fire-fighting” of security incidents to proactive detection and structured incident management. This session will offer the audience insights into the realm of cyber security incident response and the presenter will talk about current day challenges, leading practices and how organizations on the higher end of the security maturity continuum are structuring effective cyber security incident response and management programs and why.

Target Audience

The target audience for this session includes anyone responsible for information security and those tasked with ensuring organizations are well positioned to prevent and respond to security threats.

Skill Level - Intermediate / Experienced:

- CEO / COO
- IT Executive Management / CIO
- Security Specialists
- Internal Audit Managers

COBIT Objectives or Processes

- PO9 Assess and manage IT risks
- DS5 Ensure systems security

Speaker Bio

Arun is a Senior Manager with the Security & Privacy Services practice at Deloitte with over 13 years of experience serving clients in the Technology, Consumer Business and Financial Services industry sectors in technical and management leadership roles. He specializes in the areas of Information Security and Technology Risk Management Strategy, Cyber Security & Threat Management, Mobile Security, M&A IT Due Diligence and Integration and Data Protection & Compliance. Arun also

frequently speaks on the above topics and has previously spoken and acted as a panelist at conferences such as the HP Global Software Summit, Under the Radar (UTR), AITP, and the Bay Area ISACA chapters. Arun holds a Masters in Computer Science from the University of Southern California and prior to joining Deloitte was one of the technical architects responsible for development of various Solaris Security sub systems at Sun Microsystems Inc.
